

Emptiness is the dimension where matter starts to form.

BRI MOULDS
Industrial moulds

Since 1997, Made in Italy and excellence in mould production for die casting of aluminium, magnesium and plastic injection.

Two generations and total dedication to the perfection of each and every mould.

5000 sq m of floor space full of technology, flexibility and craftsmanship.

Referenced experience in the production of moulds for all industrial environments.

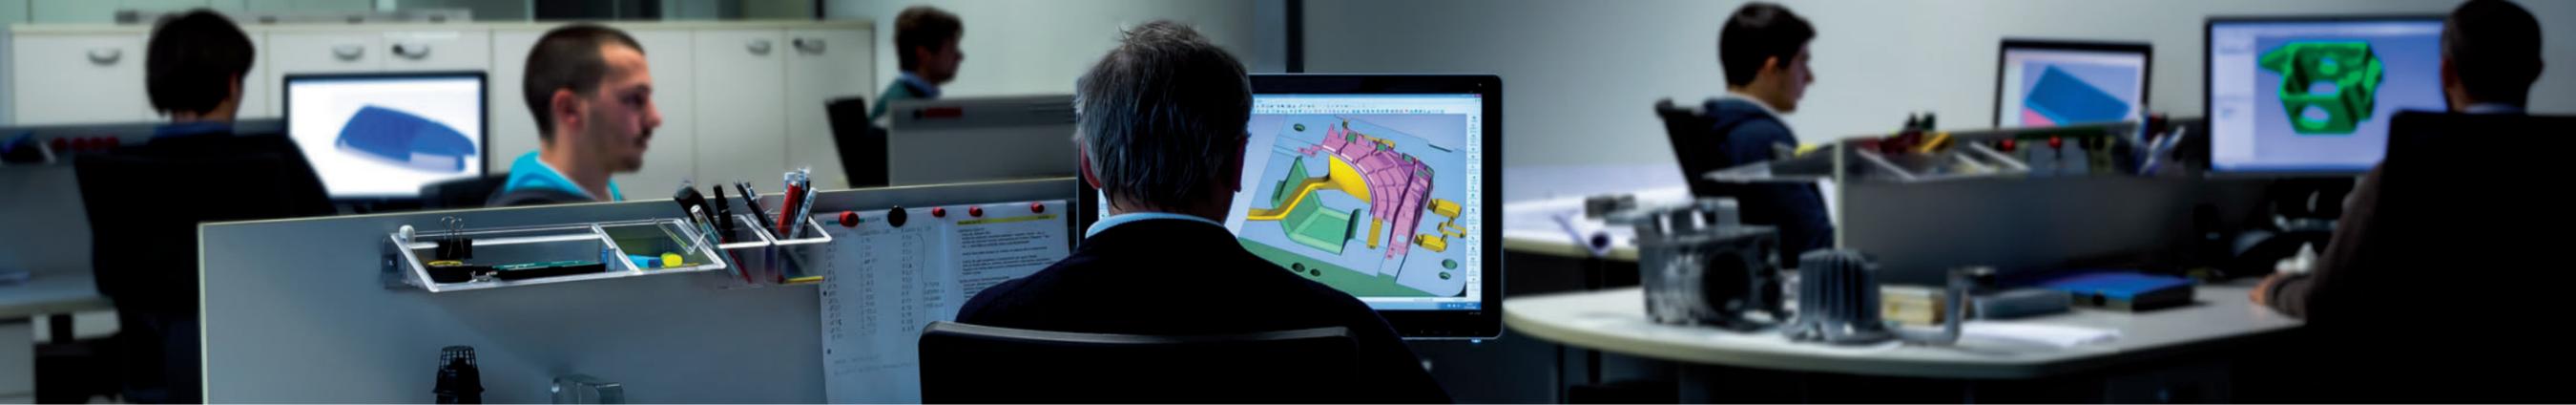

Technical consultation and precisely detailed quotes, delivered quickly.

Partnerships and quality relationships for solutions which are in-line with your production objectives.

Guaranteed delivery and production times which are monitored throughout the process.

Excellence in industrial mould production

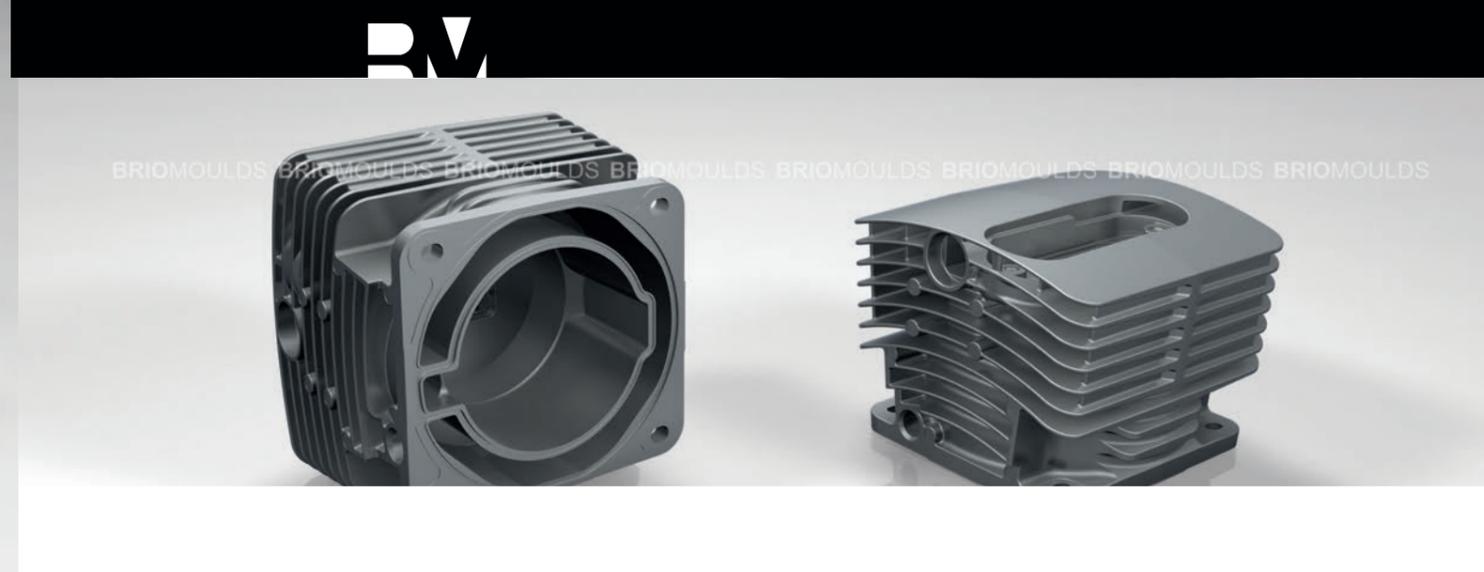

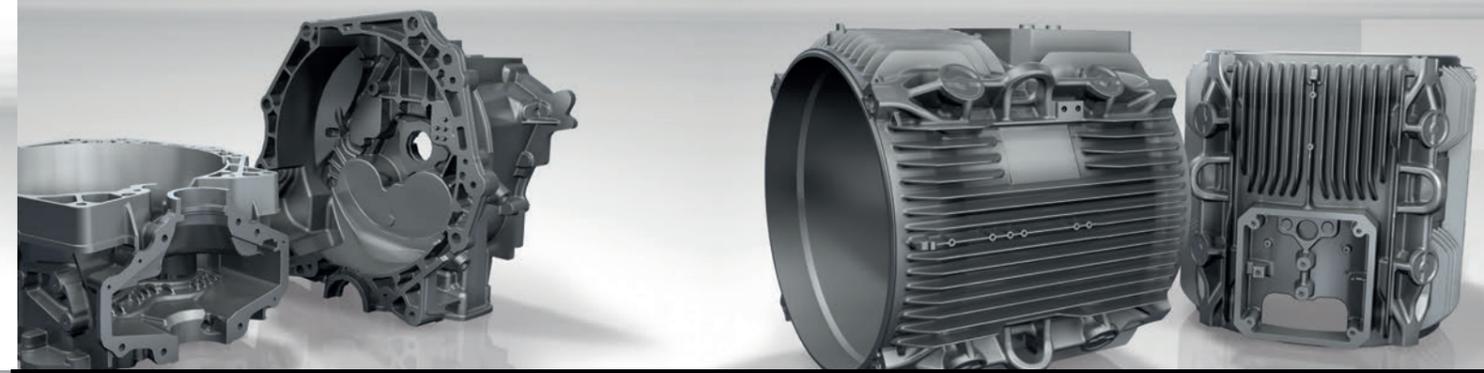

Quality planning from the initial idea to perfect casting

Consultation and verification of the feasibility of the mould's design.
Consultation services to improve the productivity of die-casting and injection moulds.
Project analysis and industrial development of the client's idea.
Rapid prototyping with various materials.
Simulation of mould filling and functionality.
Constant technical updates and training.
Design and production of die-cast and injection moulds, even with custom specifications created to suit the client's needs.

Moulds for die-casting and injection to all industrial sectors.

Mould production for aluminium and magnesium die-casting and plastic injection machines from 50 to 3000 tonnes.
Seven pick-up systems with double hoists for up to 48 tonnes.
Samples and pre-series for die-casting production.

Quality production for highly effective, durable moulds.

Quality in every working process for maximum precision moulds

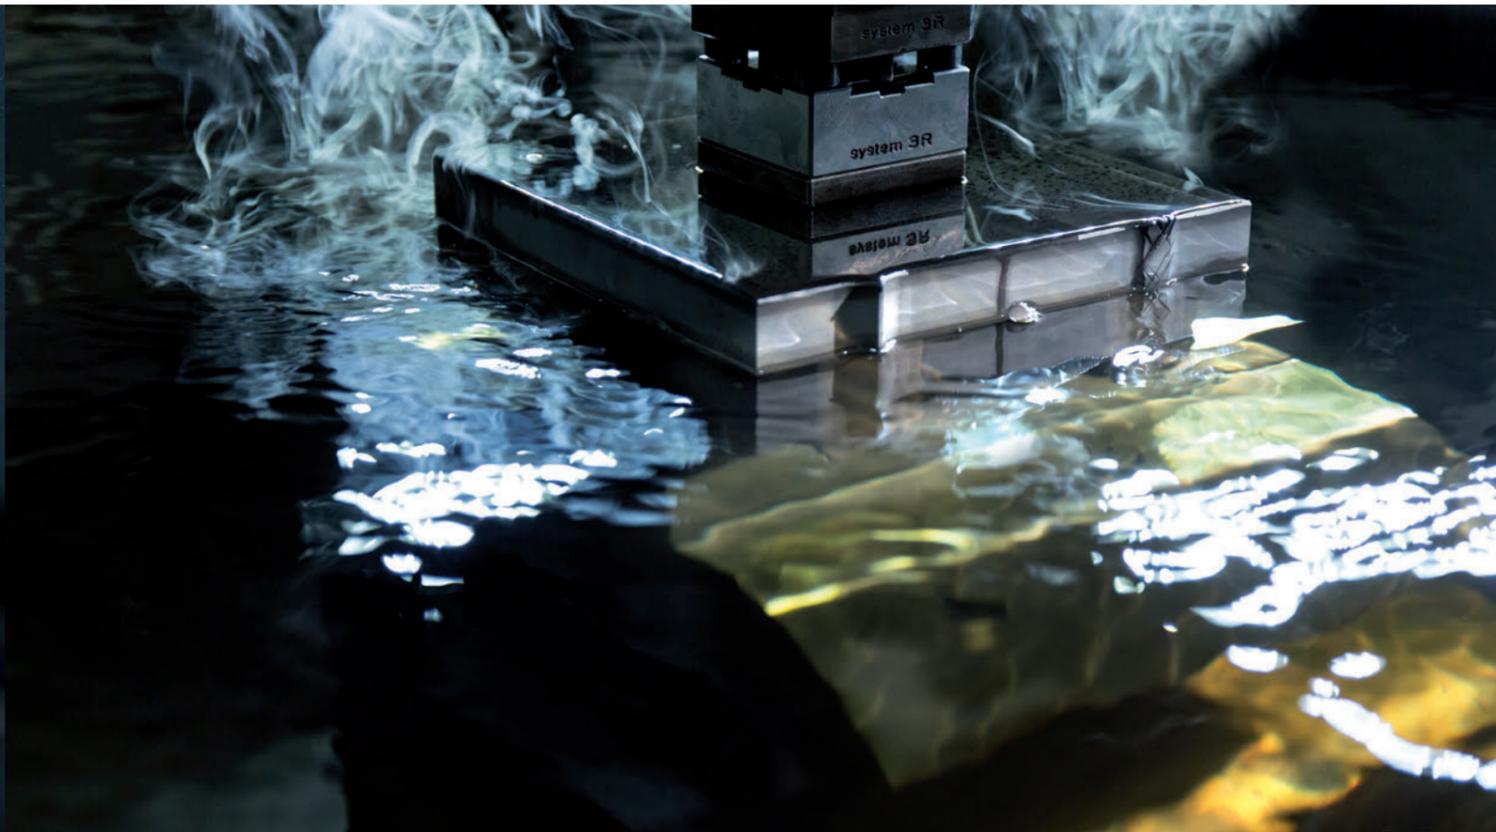

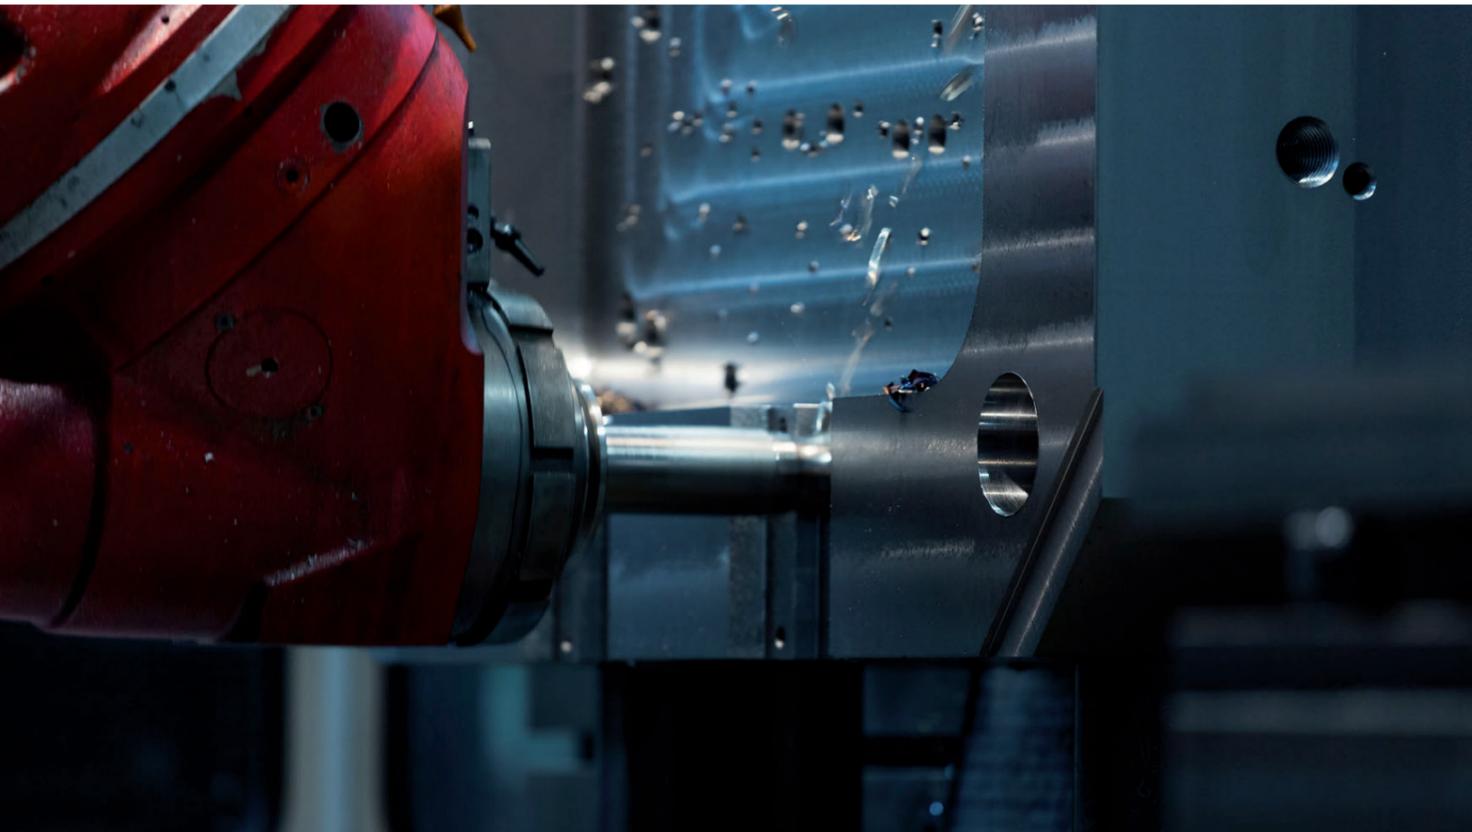

High-precision automated production centres to manufacture moulds with machining range up to 5.5 m.

High-speed machining centres with 3-4-5 axes with a machining range up to 1.5 m.

Specialised professional abilities and complete technical competence.

Constant investments to meet high production standards.

Die-casting and injection moulds of every size,

up to 50 tonnes.

Hand-crafted care for the finishings of each mould.

Four assembly departments and die quality control.
Completion, cleaning and reprocessing of the moulds with specialised safe liftings.

BM

Moulds for die casting of aluminum and plastic alloys.

Certified quality with metrology: the company's no-compromise philosophy

- On-time delivery.
- Certification of raw materials and heat treatments.
- Metrology and certification services.
- Metrology centre with systems to check measurements for parts up to 2.2 m.
- 360° collaboration with companies in the industry.
- Certified and guaranteed quality for all die-casting and injection moulds.
- Compliance with minimum tolerances and standards established in the specifications.
